PROFILE SUMMARY

Data Engineer with data architecture experience, specializing in governed analytics platforms and data quality frameworks — hands-on building automated, cloud-based data pipelines and enterprise-scale data governance solutions with Python, SQL, and modern orchestration tools.

TECHNICAL SKILLS

Languages & Databases: Python, SQL, YAML

Cloud & Data Platforms: Google Cloud Platform, BigQuery, Databricks, Azure DevOps

Data Governance & Quality: Collibra Data Governance, Collibra Data Quality, Metadata Management

Tools & Frameworks: Apache Airflow, Cloud Composer, Power BI, Git, CI/CD Pipelines

WORK EXPERIENCE

Data Architect

August 2024 – Present

MetLife

- Lead the design of the Databricks migration: modeled the metadata hub's reporting tables from governed metadata and defined the data quality validation framework enforced at ingestion
- Automated monthly data extractions with Python and the Collibra API, eliminating hours of manual effort and reducing relationship errors in the graph database
- Manage metamodel changes from stakeholder requirements, keeping conceptual, logical, and physical data layers aligned
- Orchestrate reporting workflows across 50+ data programs — from Collibra extraction to Power BI dashboards tracking Critical Data Elements — delivering monthly insights to the board of directors

Data Engineer

July 2023 – August 2024

Accenture

- Redesigned a financial reporting pipeline with SQL window functions to process 7 granularity levels in a single query, cutting compute costs 7x
- Built and maintained BigQuery data pipelines (DDL/DML) for 20+ tables, implementing automated weekly and monthly refresh schedules
- Orchestrated data workflows using Apache Airflow/Cloud Composer, managing 10+ complex DAGs with comprehensive error handling
- Implemented Azure DevOps CI/CD pipelines for automated build and release processes, ensuring reliable data pipeline deployments
- Spearheaded end-to-end Collibra Data Quality framework implementation, from business logic design to team adoption and standardization

Digital Marketing Manager

July 2021 – June 2023

Osorio Consultores

- Built automated Databox dashboards integrating multiple data sources to improve marketing campaign performance

PROJECTS

NoSQL Virtual Wallet | MongoDB, Redis, Python

2026

- Designed the document data model and ESR-based indexes powering multi-document ACID money transfers on a MongoDB replica set, with Redis cache-aside for account balances

Wildfire Susceptibility Mapping | Python, Google Earth Engine, XGBoost

2026

- Built an end-to-end geospatial pipeline ingesting 10+ satellite and environmental sources into a modeled feature set; trained ensemble models (XGBoost/LightGBM) served through a 3D dashboard

EDUCATION

Bachelor's Degree in Data Science

2022 – 2026

Universidad Católica Argentina

Buenos Aires, Argentina

- **Honors:** Awarded Academic Merit Scholarship for Highest GPA in cohort for 4 consecutive years
